Not Avail, United States, 2012. Paperback. Book Condition: New. 241 x 188 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: . surface features, their bounding surfaces, or their outline in sections, and also in terms of their relative dimensions. In the first instance they may be described in a general manner as possessing crystallographic plane surfaces or not, by such terms as the following: Euhedral, well faced, completely bounded by crystal planes; equivalent to automorphic¹ and idiomorphic.² Subhedral, partially faced, partly bounded by crystal planes; hy pantomorphic,¹ hypidiomorphic.² Anhedral, not faced, without crystal planes; xenomorphic,¹ ailotriomorphic.² In order that a pyrogenetic crystal may develop plane, crystallographic, faces on all sides it must form freely in a liquid without interference. If it grows against another solid, its surface will be conditioned by that of the adjacent solid, and will not be its own, proper, crystal surface. The interfering solid may be a finished, or a growing, crystal, of different mineral or of the same composition. Two crystals of the same kind of mineral may grow against each other and prevent the development of proper crystallographic plane surfaces. They may become subhedral if not interfered with on all sides. If they are so hampered they become anhedral. But it does not follow that crystals that are not completely bounded by crystal faces have grown against solids, or originally possessed such faces and subsequently lost them, though this may happen in some instances. Nor does it follow that curved, or rounded, surfaces develop only through solution of plane-faced crystals. There may be interference with the regular development of...
