RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 106 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1882 Excerpt: . . . observations and published on page 534 of the Keport of the Chief Signal Officer for 1873, and four from series contained in the barometric records of the Geological Survey. The series published by the Signal Officer were made by the same observers who occupied the four stations on Mount Washington, and with the same instruments, and would furnish the best possible criterion of the accuracy of that work if they were sufficiently extended. One of them, however, contains only five comparative readings of three barometers, and the other seven comparative readings of three barometers; and these data are too scant to afford a trustworthy estimate of the probable error. The following is a summary of the results: Each series of comparisons by the Geological Survey was carried through a period of several days, during which time the barometer rose or fell one or more tenths of an inch, so that different parts of the scale and tube were brought into use. The series of observations by the Signal Service observers were each made within an hours time, and exhibit small barometric ranges. The test in the former case was therefore somewhat more rigorous, and there is no reason for presuming that a longer series of observations by the Signal Service observers would have afforded a smaller probable error of instrumentation. In assigning to each of their readings an error of . 0027 inch (the general or weighted mean of all the determinations) we seem in no...
