The two constants V_0 and K must be experimentally determined from time to time for any pycnometer that is used in accurate measurements of density. This may be done by finding the capacity at several different temperatures over the required range The following is a tabulation of eight such determinations, using distilled water and corrected for buoyancy of the air. Let the student form the eight observation equations and the two normal equations, and reduce for the most probable values of V_0 and K . (The approximate answers are, $V_0 = 25.2509$, $K = 0.0005244$.) 37. Illustrations from Surveying. 1.
