

Investigations of the Groundwater System and Simulation of Regional Groundwater Flow for North Penn Area 7 Superfund Site, Montgomery County, Pennsylvania (Paperback)

Filesize: 8.62 MB

Reviews

It in a single of the best pdf. it had been written quite properly and beneficial. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Mr. Maximo Johns)

INVESTIGATIONS OF THE GROUNDWATER SYSTEM AND SIMULATION OF REGIONAL GROUNDWATER FLOW FOR NORTH PENN AREA 7 SUPERFUND SITE, MONTGOMERY COUNTY, PENNSYLVANIA (PAPERBACK)

To read **Investigations of the Groundwater System and Simulation of Regional Groundwater Flow for North Penn Area 7 Superfund Site, Montgomery County, Pennsylvania (Paperback)** PDF, you should click the link below and save the ebook or gain access to additional information which might be have conjunction with **INVESTIGATIONS OF THE GROUNDWATER SYSTEM AND SIMULATION OF REGIONAL GROUNDWATER FLOW FOR NORTH PENN AREA 7 SUPERFUND SITE, MONTGOMERY COUNTY, PENNSYLVANIA (PAPERBACK)** ebook.

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Groundwater in the vicinity of several industrial facilities in Upper Gwynedd Township and vicinity, Montgomery County, in southeast Pennsylvania has been shown to be contaminated with volatile organic compounds (VOCs), the most common of which is the solvent trichloroethylene (TCE). The 2-square-mile area was placed on the National Priorities List as the North Penn Area 7 Superfund site by the U.S. Environmental Protection Agency (USEPA) in 1989. The U.S. Geological Survey (USGS) conducted geophysical logging, aquifer testing, and water-level monitoring, and measured streamflows in and near North Penn Area 7 from fall 2000 through fall 2006 in a technical assistance study for the USEPA to develop an understanding of the hydrogeologic framework in the area as part of the USEPA Remedial Investigation. In addition, the USGS developed a groundwater-flow computer model based on the hydrogeologic framework to simulate regional groundwater flow and to estimate directions of groundwater flow and pathways of groundwater contaminants. The study area is underlain by Triassic- and Jurassic-age sandstones and shales of the Lockatong Formation and Brunswick Group in the Mesozoic Newark Basin. Regionally, these rocks strike northeast and dip to the northwest. The sequence of rocks form a fractured-sedimentary-rock aquifer that acts as a set of confined to partially confined layers of differing permeabilities. Depth to competent bedrock typically is less than 20 ft below land surface. The aquifer layers are recharged locally by precipitation and discharge locally to streams. The general configuration of the potentiometric surface in the aquifer is similar to topography, except in areas affected by pumping. The headwaters of Wissahickon Creek are nearby, and the stream flows southwest, parallel to strike, to bisect North Penn Area 7. Groundwater is...
